

PROVA N. 1

1. I principi generali dell'attività amministrativa secondo la Legge n. 241/1990.
2. Pubblicazione ed esecutività delle deliberazioni degli organi collegiali comunali.
3. Il candidato descriva la procedura e i documenti necessari per l'iscrizione anagrafica di un cittadino extracomunitario.

The Earth's climate

Today, the Earth's climate has a huge effect on the daily lives of all the people in the world. It has always had a big effect on life on Earth, and it had a big effect on how life started billions of years ago.

So, what is climate? Climate is the usual weather in a place over a long time - normally thirty years or more. Weather can change quickly, and a place can have very different weather from one day to the next. But climate is a weather standard over a long time.

PROVA N. 2

1. I compiti del responsabile del procedimento.
2. Le competenze della Giunta comunale.
3. Il candidato descriva le modalità, i documenti necessari e la tempistica per rendere la dichiarazione di nascita davanti all'Ufficiale di Stato Civile in base all'art.28 del DPR 396 DEL 2000.

A warmer world

Weather stations across the world give us information about the temperature on the Earth's surface. We also get information from ships in the oceans. All this information helps scientists to decide if the temperature on Earth is going up or going down.

Information from the last 150 years shows that the temperature on the Earth's surface has gone up. The temperature in some places has increased more than others, and the warming in the Arctic is greater than in all other places on Earth.

PROVA N. 3

1. La nullità del provvedimento amministrativo
2. Le funzioni del Sindaco come capo dell'Amministrazione comunale
3. Il candidato descriva le caratteristiche della Carta d'identità Elettronica ed i dati contenuti in essa, anche in riferimento ai nuovi standard di sicurezza digitale.

Changes in Earth's climate

Some years have always been warmer or colder than others, and the Earth's climate has changed a number of times in the past. This is because natural things can cause the Earth's temperature to change from one year to the next, or to change over a longer time. These things include the amount of heat coming from the Sun, the effect of volcanoes and weather facts like El Nino.

Each of the past four decades has been warmer than the one before.

PROVA N. 4

1. La revoca del provvedimento amministrativo
2. Le funzioni del Sindaco come Ufficiale di Governo
3. La famiglia anagrafica e la convivenza di fatto.

The effects of a warmer world

In Australia, there have been many large fires over the last few years. In the Australian summer, the land, and the plants growing on the land, can get very dry. It is then easy for a fire to start and to become very large, very quickly. These fires badly damage people's homes and other buildings, and many people lose their lives in the fires. Climate change and extreme weather can also have a damaging effect on our health. More people could catch some diseases in a warmer world.

PROVA N. 5

1. La motivazione dell'atto amministrativo.
2. Lo Statuto comunale.
3. Come si definiscono i gradi di parentela e affinità.

Effects of climate changes on animals

When changes to the climate are slow, animals can find ways to live with the changes. But when changes to the climate happen very quickly, it is much more difficult for animals to do this. The climate change we are seeing right now is happening very quickly, and it is damaging for many of the living things on Earth. At the same time, animals are losing their habitats - the places they live. People cut down trees to build towns and cities and to grow food in fields. All of these things take habitats away from animals.

PROVA N. 6

1. I pareri nel procedimento amministrativo.
2. I Regolamenti comunali.
3. Definizione di residenza, domicilio e dimora.

Use of energy

Across the world, people use twenty times more energy today than they did in 1850. In this time, there has also been a change in the energy we use. In the past, we burned wood and used energy from the wind and from the water in rivers. Today, we burn a lot more fossil fuels than we did in the past. We also started to drive cars and travel in planes, and this burns fossil fuels, too. Today, 80 percent of the energy we use comes from fossil fuels.

PROVA N. 7

1. Definizione ed elementi del provvedimento amministrativo
2. Funzioni dei dirigenti comunali
3. Separazione e divorzio di fronte all'Ufficiale di Stato civile.

The risks of climate change in oceans

Scientists are starting to understand the effects that acidic water has on the animals that live in the ocean. Many of the very small animals in the ocean, like corals, are really important for other ocean animals and for people. For example, people eat a lot of fish, and these fish eat smaller fish and other small animals in the ocean. If the numbers of these smaller animals get very low because they are killed by acidic water, there will be lower numbers of bigger fish. This could then cause a problem for all the animals that live in the ocean, including those that people eat.

PROVA N. 8

1. L'avvio del procedimento amministrativo.
2. Il Segretario comunale.
3. I documenti necessari per le pubblicazioni di matrimonio.

Cutting carbon

In Paris, in 2015, countries agreed to cut the amount of carbon dioxide and other gases they put into the atmosphere. To stop the Earth's warming going above 1.5 degrees Celsius, people need to stop putting any carbon dioxide into the atmosphere by the middle of this century. This means that we need to cut it right now. Even if we stop putting any carbon dioxide into the atmosphere from now, the temperatures on Earth will stay warm, and this will cause changes to the climate for hundreds of years in the future.
